

TimeOS — Quick Start

A 5-step audit to reclaim your time and attention

1. Track Before You Trim

Log how you actually spend a full day before changing anything — awareness comes first.

2. Name Your Time Leaks

Circle the blocks that drained energy without paying you back in progress or rest.

3. Rank by Return

Sort your regular activities by what they actually give back, not what they promise.

4. Protect One Block

Pick a single daily block to defend from interruptions — this is your compounding asset.

5. Review Weekly, Not Daily

Adjust on a weekly cadence so one bad day doesn't derail the whole system.
